REPORT
Phase I Environmental Site Assessment
53381 Marina Drive
Elkhart, Indiana

Dear Sirs:

In accordance with your request, **Weaver Boos Consultants, Inc.** (Weaver Boos) has completed a Phase I Environmental Site Assessment (ESA) of the above referenced site. The results of this study have revealed no evidence of significant environmental impairment.

We appreciate the opportunity to provide you with these services. If you have any questions or comments regarding this report or our recommendations, please do not hesitate to call. It has been a pleasure working with you on this project.

Very truly yours,
Weaver Boos Consultants, Inc.

David S. O'Dea
Project Engineer

John W. Weaver II, P.E.
President

EXECUTIVE SUMMARY

Weaver Boos Consultants, Inc. (Weaver Boos), has completed a Phase I Environmental Site Assessment (ESA) of 53381 Marina Drive in Elkhart, Indiana. On October 13, 1993, Weaver Boos performed a Phase I ESA walk-through and visually assessed the site for potential environmental concerns. Weaver Boos inspected the site for indications of underground storage tanks (USTs), above ground storage tanks (ASTs), possible polychlorinated biphenyl (PCB) containing equipment, asbestos-containing material (ACM), hazardous material storage or handling areas, containerized or bulk wastes, and visual indications of contaminated soils.

We also performed a records review to evaluate the potential presence of hazardous or toxic materials/wastes (as defined in the Resource Conservation and Recovery Act {RCRA}, the Comprehensive Environmental Response Compensation and Liability Act {CERCLA} as amended by the Superfund Amendments and Re-authorization Act {SARA}, and the Toxic Substances Control Act {TSCA}) at the subject property.

The regulatory search revealed that a few nearby facilities have been or are currently being investigated by state and federal agencies regarding the presence or the handling of hazardous waste materials. However, none of these facilities are located immediately adjacent to the subject site, and as discussed in Section 4.3, were not observed to be impacting the property.

Two 5-gallon containers of hazardous solvents were observed. According to Dygert representatives, no releases of these solvents onto the surrounding soils has occurred. Two earth mounds were observed on the north edge of the subject site. According to the facility manager, these two mounds were created during parking lot construction and consist of soil and gravel. Independent confirmation that the site soils have not been impacted by solvents and that the earth mounds consist of soil and gravel only, can be accomplished by soil testing. We observed no other visible evidence of environmental impairment at the subject site due to USTs, ASTs, PCB-containing equipment, ACM, hazardous materials, or adjacent land use.

The body of this report presents all findings in narrative form. Figures and photographs are presented at the end of the report along with the Appendices, which consist of a copy of the site inspection checklist and additional information in support of the regulatory review.

ENVIRONMENTAL SITE ASSESSMENT

53381 Marina Drive

Elkhart, Indiana

Weaver Boos Project No. 93053.00

1.0 INTRODUCTION

Weaver Boos Consultants, Inc. (Weaver Boos) has completed a Phase I Environmental Site Assessment of 53381 Marina Drive located in Elkhart, Indiana. The assessment of the property was authorized on October 6, 1993, by Mr. Dave Dygert of Dygert Seating, Inc.

The scope of services performed during this assessment included a Phase I Site Assessment consisting of a visual site survey and review of available regulatory information. The purpose of this report is to present our findings regarding the areas of environmental concern, if present, at the subject site.

2.0 PHYSICAL SITE DESCRIPTION

The inspection of 53381 Marina Drive was conducted on October 13, 1993. While on-site, we looked for indications of potential environmental impairment such as stressed vegetation, stained soils, debris, chemical usage, underground storage tanks (USTs), aboveground storage tanks (ASTs), polychlorinated biphenyls (PCBs), and asbestos containing material (ACM). A copy of the site inspection checklist prepared during the site inspection is included in Appendix A.

2.1 Site Location

The 11.01 acre site is located just south of the intersection of Marina and Cooper Drive in Elkhart, Indiana. The site lies in the Northwest 1/4 of Section 26, Township 38 North, Range 5 East. Figure 1 in the Figures section illustrates the site location. The site contains a 63,440 square foot building. The areas surrounding Dygert Seating, Inc. consist of small manufacturing companies and warehouses (See Photos in Appendix B).

2.1.1 Adjacent Land Use

The subject site is bounded on the south by Marty-R Carpet Warehouse. Another Dygert Seating, Inc. property is located directly north of the subject site. To the east on Marina Drive is Geocel Corporation, a company that manufactures sealants and adhesives (see photos in Appendix B). Figure 2 illustrates the site layout and adjacent properties.

2.2 Site Conditions

Dygert Seating, Inc. is a seat manufacturing company. The main building was constructed in 1983 and contains an office section and a manufacturing section. Interior building materials in the office section include ceramic and vinyl floor tiles, carpet, wall-board, plaster and ceiling tiles. Building materials in the manufacturing section include plywood, glass-wool insulation, concrete masonry and steel. The area is generally flat and the land was mainly agricultural in the past. It is currently a manufacturing area that is zoned as M-3. M-3, as defined by the City of Elkhart Department of Planning, is designated as manufacturing with rights to storage, open areas, and disposal of raw materials, provided that they are deemed "not dangerous to vegetation and population".

3.0 POTENTIAL ENVIRONMENTAL CONCERNS

3.1 Storage Tanks

Underground storage tanks (USTs) have the potential to leak and/or release their contents into the surrounding environment. The U.S. Environmental Protection Agency (USEPA) estimates that 8-20 percent of all USTs leak and/or have had releases to the environment. Newly enacted federal and state regulations have been implemented to strictly control the uses of USTs.

Current regulations place stringent requirements upon owners/operators of UST systems. These include upgrade requirements for all systems in place prior to the initiation of the law and installation requirements for all new systems. All USTs are required to include a method of detecting releases from both the tanks and the associated piping. In addition, all UST systems have requirements for construction that include protection from corrosion and compatibility of tank and line materials with stored products. As such, fewer releases from systems meeting these standards represent the impact they once did. It should be further noted that current UST regulations place very stringent requirements upon owners/operators should releases occur from their tanks. This includes detailed investigatory and remedial requirements

as well as financial assurance requirements to demonstrate the ability to cover the costs associated with a release should it occur. As such, the current owners of any registered systems near the site would maintain liability for releases from their systems.

During our inspection, we noted no evidence of the presence of USTs or ASTs on the subject property. According to the ERIIS Report there are no registered USTs at the subject site.

3.2 Polychlorinated Biphenyls (PCBs)

Prior to 1976, polychlorinated biphenyls (PCBs) were commonly used in di-electric fluids in transformers, light ballasts, capacitors and hydraulic fluids because of their desirable thermal characteristics. In 1976, PCBs were demonstrated to be highly toxic and, because of their persistence in the environment, their manufacture was discontinued in the United States.

One of the most common utilization's of PCB material is in transformers associated with electrical distribution. Under current USEPA regulations, transformers must be classified as "non-PCB" (containing oils which are less than 50 parts per million {ppm} PCBs), "PCB-contaminated" (containing 50-499 ppm PCBs), or "PCB transformers" (500 or more ppm PCBs). Untested transformers by law must be classified as "PCB-contaminated" while all new transformers must be guaranteed as "non-PCB" by their manufacturer.

Four transformers were noted on the subject site. Three transformers were clustered on a power pole located near the southeast corner of the property. They were all labeled as non-PCB and appeared to be fairly new and in good condition. One transformer was observed in the southeast corner of the building. The manufacturer of the transformer is Square D Company, located in Palatine, Illinois. According to Square D representatives, the unit is a non-PCB transformer.

3.3 Asbestos Containing Material (ACM)

Asbestos containing material (ACM) is usually associated with building materials as binder, fire retardants and insulating agents. Other materials such as suspended ceiling tiles and floor tiles have also been known to contain asbestos. Exposure to asbestos fibers has been shown to cause a variety of health problems including asbestosis and lung cancer. ACM in poor condition can readily yield fibers that can be inhaled, escalating exposure risks. This is true for most friable forms of ACM.

The 1973 National Emission Standards for Hazardous Air Pollutants (NESHAPS) partially banned the use of spray-applied asbestos containing material (ACM) in new buildings. These regulations were expanded in 1975 and 1978 to ban the use of all types of insulating ACM in new buildings. As a result of these laws banning the use of asbestos products, most buildings constructed after 1980 utilized fewer ACM. Thus, the likelihood of construction materials containing asbestos generally decreases as the time of construction since 1980 increases.

No suspect ACMs were observed on the subject site.

3.4 Solid Waste

Solid waste is defined as any non-exempt solid, liquid, semi-solid or contained gaseous material which has been discarded, has served its intended purpose, is a by-product of manufacturing or mining, or constitutes garbage, refuse, or sludge (40 CFR 261.2).

Two earth mounds were observed on the north property boundary. According to the maintenance supervisor, Jerry Alexander, both mounds consist of accumulations of soil which had been moved during parking lot construction. The mound on the northeast edge of the subject site was created during the construction of the original parking lot. The mound on the northwest edge was created during the development of a recent parking lot expansion. Since the earth mounds are reported to consist of soil and gravel only, they do not appear to represent an environmental impairment to the subject site or adjacent property. Soil sampling of the earth mounds would have to be conducted to independently confirm that the mounds are of soil and gravel only. No other solid wastes were observed to be stored at the subject site. Photographs of the two earth mounds can be found in Appendix B.

3.5 Utilities

Permeable fill materials associated with subgrade utilities can provide pathways for contaminant migration (were it to exist) to or from a site. The various utilities associated with this site are discussed below.

3.5.1 Water

Water services are provided by the City of Elkhart and sanitary services are provided by an on-site septic system.

3.5.2 Electrical/Gas/Telephone

Electric service is provided by Indiana and Michigan Power Company and gas service is provided by Northern Illinois Public Service Company (NIPSCO). Telephone service is provided by General Telephone and Electric Company (GTE).

3.6 Hazardous Materials

Two 5-gallon containers of hazardous materials were observed in the manufacturing section of the facility. One 5-gallon container was labeled as containing toluene, and the other 5-gallon container was labeled as containing methylene chloride. Good house keeping practices were observed in the immediate vicinity and no spills from the containers were evident. Mr. Alexander stated that he is not aware of any spills from these two containers.

4.0 SITE HISTORY AND RECORDS REVIEW

4.1 Site Ownership

We contacted the Elkhart County Township Assessor's Office and the Client concerning site ownership. The following information was obtained from their files:

<u>Owner</u>	<u>Date</u>
Northland Corp.	1969 to September, 1983
David and Phyllis Dygert	September, 1983 to Present

It must be noted that the above information is based entirely upon a cursory examination of the township records regarding the subject site and not a complete records review, which would include a chain of title. Further investigation is needed before any conclusions can be drawn about the subject site regarding past site uses.

4.2 Aerial Photography

Historical aerial photographs can aid in the identification of past activities at the site and on adjacent properties. Weaver Boos has ordered current and past aerial photographs from ERIIS. At the present time, these aerial photographs have not been received. Upon receipt and review, the client will be notified if the aerial photographs indicate past site usage indicative of environmental impairment.

4.3 Regulatory Review

Since the early 1970s, environmental agencies have been tracking the compliance of many facilities with the various laws that were promulgated to halt the pollution of the air and water. More recently, records have been maintained which document spills of hazardous materials and the locations of known waste sites or regulated waste handling facilities. The following sections describe the review of various regulatory lists.

4.3.1 U. S. Environmental Protection Agency (USEPA)

Environmental Risk Information and Imaging Services (ERIIS), headquartered in Alexandria, Virginia, was retained to provide a Federal Environmental Data (FED) Report for the adjacent Dygert Seating property located directly to the north. The report was completed on April 27, 1993, and is considered current enough for this project. This report, presented in Appendix C, is a computerized search of the federal environmental data which identifies various properties with a record of environmental activity from the files of the United States Environmental Protection Agency (USEPA). The various lists reviewed include the National Priorities List (NPL), the Facility Index System (FINDS) list, the Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) list, the Resource Conservation and Recovery Act (RCRA) list, and the Emergency Response Notification System (ERNS) list. These lists are summarized below.

4.3.1.1 National Priorities List

The National Priorities List (NPL), commonly referred to as the Superfund list, is EPA's database of uncontrolled or abandoned waste sites identified for priority remedial actions under the Comprehensive Environmental Response Compensation and Liability Act (CERCLA). A site, to be included on the NPL, must either meet or surpass a predetermined hazardous ranking system score, be chosen as a state's top priority site, or meet all three of the following criteria: (1) the US Department of Health and Human Services issues a health advisory recommending that people be removed from the site to avoid exposure; (2) EPA determines that the site represents a significant threat; (3) EPA determines that clean-up of the site is the most cost-effective method to alleviate the threat to human health and the environment. A search of the 1992 NPL revealed two (2) Superfund sites located within the 46507 and 46514 zip code areas. None of the sites are located on property adjacent to the subject site and none were observed to be impacting the subject site.

4.3.1.2 Facility Index System

The USEPA, through the various state regulatory agencies, maintains a listing of sites that have been reported under the various environmental programs to have compliance problems. The Facility Index System (FINDS) includes a compilation of sites which the EPA has either been actively involved in enforcement of have been made aware of the site through some other means such as state or local enforcement files and/or citizens complaints. Each individual listing includes a reference to the appropriate EPA Program Office that may have files on the site or facility.

A search of the 1992 FINDS Database revealed 131 FINDS properties located within the 46507 and 46514 zip code areas. None of the sties are located adjacent to the subject site and none were observed to be impacting the subject site.

4.3.1.3 Comprehensive Environmental Response Compensation and Liability Information System

Under the Comprehensive Environmental Response Compensation and Liability act (CERCLA), the various states were required to develop a list of sites that represent a release or threatened release of hazardous substances to the environment. The Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) is the program under which the state of Indiana has compiled this information. Based upon a preliminary ranking by the state of a listed site's potential liability, the USEPA priorities the various properties for further classification and potential inclusion on the National Priorities List (NPL or Superfund List).

A search of the 1992 CERCLIS Database revealed ten (10) sites within the 46507 and 46514 zip code areas. None of the sites are located on the property adjacent to the subject site and none were observed to be impacting the subject site.

4.3.1.4 Resource Conservation and Recovery Act

The Resource Conservation and Recovery Act (RCRA) is empowered to manage hazardous waste from its point of generation to its point of disposal. This "cradle to grave" management of waste is designed to control the facilities currently involved in either the generation (generators) or treatment, storage or disposal (TSD) of wastes. A TSD facility includes active landfills, surface impoundment's, and incinerators and as such are required to meet much more restrictive standards for compliance. The RCRA Facilities database is a compilation by EPA of those facilities that have met the permitting requirements of the regulation.

A search of the recent RCRA DataBase revealed numerous RCRA sites within Elkhart County. Two sites located near the subject site are listed as RCRIS Large Quantity Generators. However, the Total Reported Waste Amounts have not been listed and neither site was observed to be impacting the subject site.

4.3.1.5 Open Dump Sites

A search of the recent Open Dump Inventory of facilities that do not comply with classification codes of Solid Waste Disposal Facilities and Practices revealed one (1) site within the one mile radius. Specific information is provided in Appendix B, however, the dump does not appear to have any impact on the subject site.

4.3.1.6 Toxic Release Inventory

The Toxic Release Inventory (TRI) contains information on the industrial release and/or transfer of toxic chemicals. A search of the TRI DataBase revealed numerous TRI sites within Elkhart County and two TRI sites within a half mile of the Dygert Seating property. However, neither were determined to impact the subject site.

4.3.1.7 Emergency Response Notification System

The Emergency Response Notification System (ERNS) is a national database of reported release of oil and hazardous substances. The database contains information from spill reports made to various federal, state and local authorities including the various state regulatory agencies, the USEPA, the US Coast Guard, the National Response Center and the Department of Transportation. Along with the reporting requirements of the various regulations, stringent investigatory and clean up requirements are placed upon the party responsible for a release. These requirements are designed to expeditiously address releases to minimize their impact.

A search of the 1987 through 1992 ERNS List revealed no (0) sites that reported spills of oil or hazardous substances in the 46507 and 46514 zip code areas.

4.3.2 State Database Information

The State Report, presented in Appendix C, includes the Underground Storage Tank (UST) Facility Information List, the Leaking UST List, and the Indiana Land Based Disposal Sites List. The listings are described and the potential impact to the subject site are addressed in the following sections.

4.3.2.1 Leaking Underground Storage Tanks (LUST) List

The Elkhart Health Department maintains an inventory of reported leaks from registered underground storage tanks (USTs) located within Elkhart County. Their files indicate that there have been no environmental concerns in the area surrounding the subject site.

4.3.2.2 Underground Storage Tank (UST) Facility Information List

A list of registered underground storage tanks with pertinent information is included in the regulatory information (See Appendix C).

4.3.2.3 Land-Based Disposal Sites

The Land-Based Disposal Site list is an inventory of all historical and currently active landfills, disposal surface impoundments, land application sites and illegal dumps within the search county. A review of this list revealed three (3) disposal sites within Elkhart County, however, none are on properties adjacent to the subject site. The nearest landfill is a half-mile from Dygert Seating, Inc., and we observed no environmental impact (See Appendix C).

5.0 CONCLUSIONS

Based on our review of regulatory files, interviews with public and private agencies and a site inspection, it is our opinion that conditions at this site do not indicate the presence of significantly environmentally detrimental conditions.

Two 5-gallon containers of hazardous solvents were observed in the manufacturing section of the facility. According to Dygert representatives, no releases of these solvents onto the surrounding soils has occurred. Two earth mounds were observed on the north edge of the subject site. According to the facility manager, the two mounds were created during parking lot construction and consist of soil and gravel. Independent confirmation that the site soils have not been impacted by solvents and that the earth mounds consist of soil and gravel only, can be accomplished by soil testing.

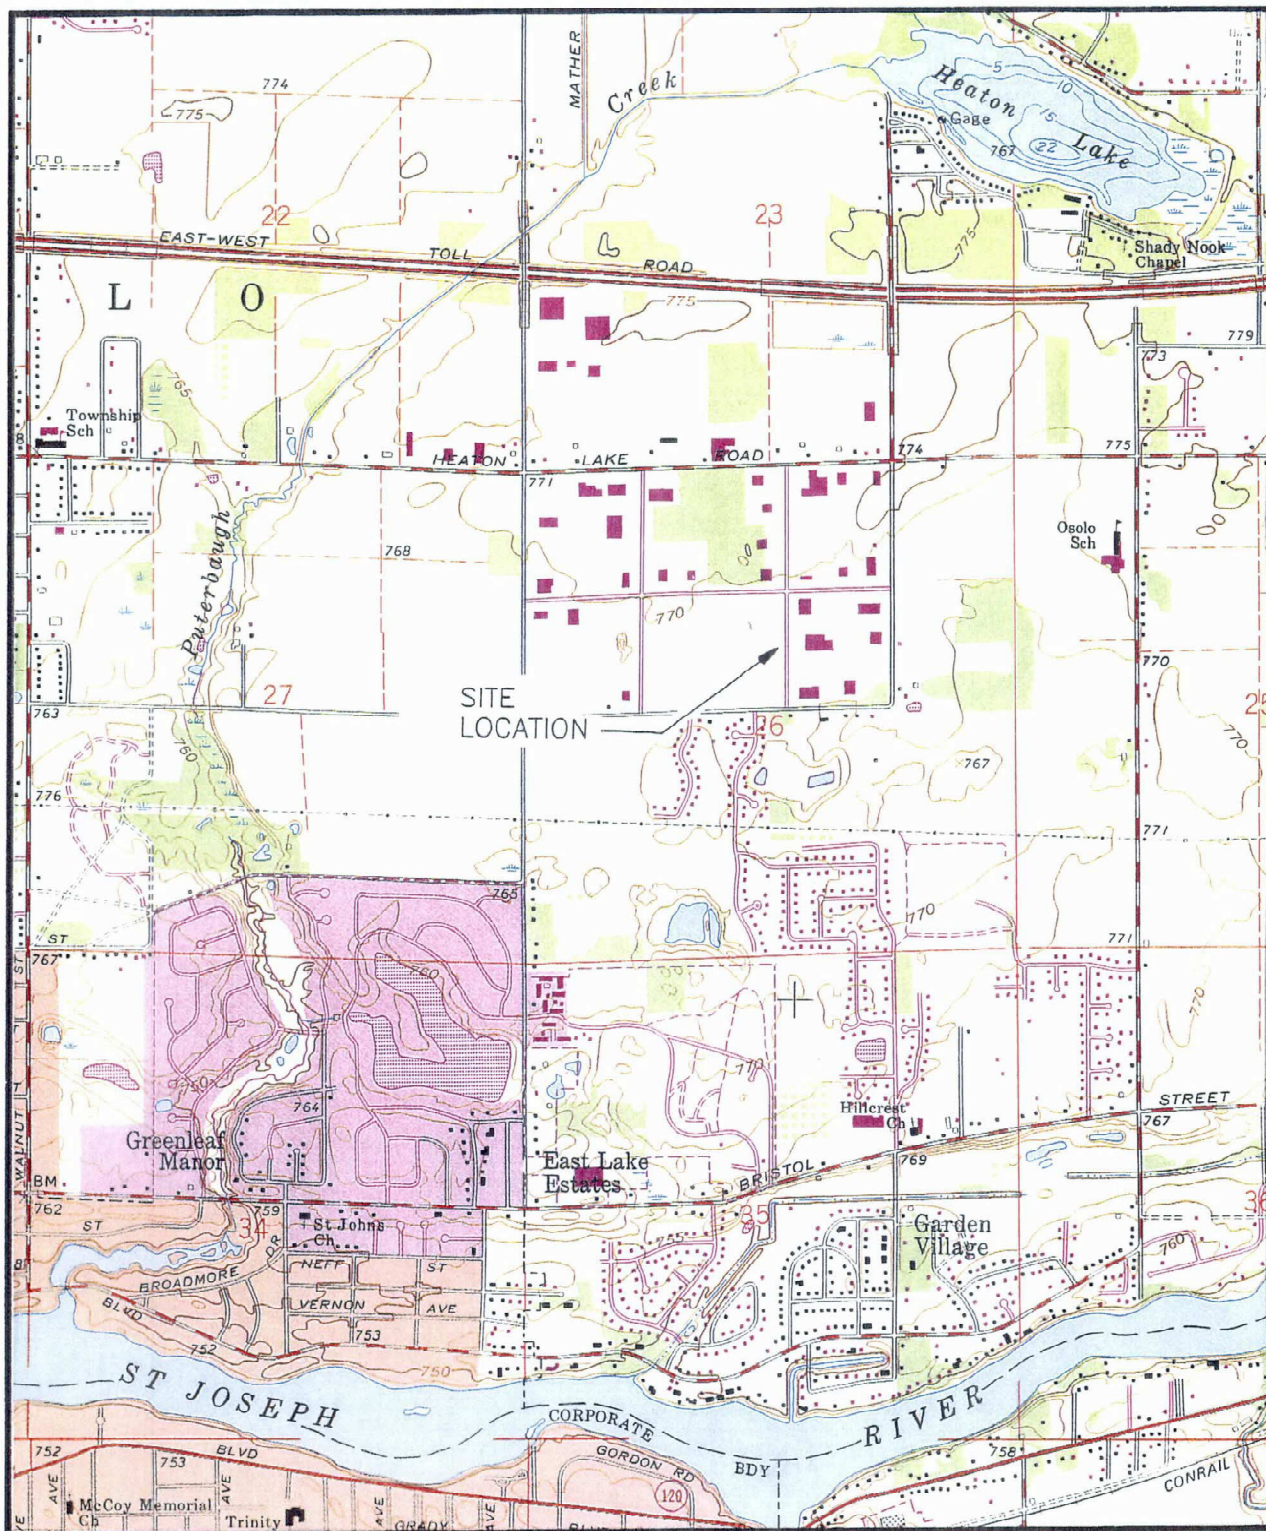

The regulatory search revealed some facilities in the Elkhart area that are listed on several federal and state inventories for various reasons. However, because of their locations being greater than 1/4 mile from the subject site, it is unlikely that these sites have impacted the subject site.

6.0 QUALIFICATIONS

Weaver Boos believes this study was developed in general accordance with the technical standards of practice for environmental audits at the time the study was conducted. The study was intended to establish the "due diligence" inquiry requirements needed to establish an "innocent landowner" defense, as provided for in the 1986 Superfund Amendments and Reauthorization Act (SARA), 42 USC 9601 (35). It should be noted, however, that no investigation can completely eliminate the possibility of hazardous waste and/or environmental contamination at a particular site. However, the standard of care exercised for this study was in accordance with generally accepted practices and a reasonable effort was made to ensure that the information presented in this report is materially complete and accurate.

The conclusions presented in this report are professional opinions based solely upon visual observations of the site and vicinity and our interpretation of the available historical information and comments reviewed, as described in this report. They are intended for the sole use of our Client. The scope of services performed in execution of this investigation may not be appropriate to satisfy the needs of other users, and any use or reuse of this document of the findings, conclusions, or recommendations presented herein is at the sole risk of said user. We, therefore, cannot be responsible for independent conclusions, opinions or recommendations of others based on our study. If additional information from the site is generated, it should be provided to us that we may evaluate its impact on our conclusions.

APPENDIX A
INSPECTION CHECKLIST

WEAVER BOOS CONSULTANTS, INC.
PHASE I SITE ASSESSMENT CHECKLIST

DATE: 10/13/93
WBC PROJECT NO. 93-53
INSPECTOR ODEA

I. PHYSICAL SITE DESCRIPTION

Facility /project name: Dygest Seating, Inc.
Address: 53381 Marine Drive
City, State, Zip Code Elkhart IN
County Elkhart
Property boundaries (natural or manmade e.g. woods, streets) Streets and other light industrial development

II. GENERAL PHYSICAL CONDITIONS

Size of site (e.g. acreage) 11.03 acres
Topography _____
• Relief (flat, rolling) flat
• Depressions None observed
• Fill (unusual vegetation, scarred surfaces, piles) Two earth mounds on north property boundary
• Land Use Light industrial
• Structures One main building

- Number of Buildings: One
- Age of Buildings: 1983 (10 yrs)
- Materials Buildings Constructed of: Concrete block masonry, steel, brick veneer
- Condition and Cleanliness of Buildings and Surrounding Area (debris, drums, equipment clutter):
Generally clean conditions, little clutter, no equipment
- Warnings, Notices, or Permits Displayed (type): None observed

Past Land Use: Agricultural

Odors

- Description (gasoline, paint, chemical): None observed
- Location: N/A

Spills

- Location: None observed
- Description (size, composition): N/A

Staining (on walls, ceilings, floors, ground, etc.)

- Location: None observed
- Color: N/A
- Description (size, composition): N/A

Vegetation

- Ground Cover (trees, grass, crops, bare): Approximately 1/3 paved, 1/3 grass, 1/3 natural grass w/ misc. growth
- Discoloration (description/location/probable cause): None observed

- Bare Spots (location/probable cause): None observed
- Stunted Vegetation Growth (location/description): None observed
- Increased Vegetation Growth (location/description): None observed

Hydrology

- Bodies of Water: On Site (ponds, streams, ditches): Drainage ditch located on north property boundary
- Wetlands (detailed study required?): None observed
- Source of Water (where water in streams, rivers, ditches is flowing from): Rain water
- Discharge Points of Water: City street
- Site Receives Surface Water Run-off from (direction): Not discernable
- Run-off from Site Flows to (direction into inlets, street, adjacent land): Street

Flood Plain: None observed

Geology and Hydrogeology (Records Review)

- Soil Type (clay, sand, loam): Sandy soil
- Drainage (good, fair, poor): good to poor
- Depth to Bedrock: unknown
- Groundwater Depth/Flow Direction: 7 to 10' / NW

III. Storage Tanks

USTs

- Evidence of On-Site/Adjacent Site USTs (pipes, vents, pump islands, fill caps, patching):

None observed

• Location: N/A

• Contents: N/A

- Tank ID #: N/A
- Size: N/A
- Age: N/A
- Tank Type (steel, fiberglass, composite): N/A
- Records (tightness testing, inventory): N/A

ASTs

- Location: None observed
- Contents: N/A
- Age/Condition of Tank: N/A
- Evidence of Spills/Leaks: N/A

IV. PCBs

- Type/Number of Equipment: Four transformers all appear to
 ID #: be non-PCB type transformers (see Report)
- Labeled: N/A
- Location: N/A
- Condition of Units: N/A
- Condition of Surroundings: N/A
- Owner of Units: N/A

V. Equipment Used On Site

- Type of Equipment (processing, maintenance): Fork lift, sewing machines, glue machine
- Location: Main processing area
- Chemicals Used by Equipment (process): Adhesives, very little solvents, paints
- Chemicals Used in Cleaning Equipment (maintenance): Misc. cleaning fluids
and very little solvents
- Cleanliness/Upkeep of Equipment: Generally clean

VI. ACMs

ACM Identification: None observed

Classification: N/A

Location: N/A

Condition: N/A

Quantity: N/A

VII. Utilities (include name of public utility)

City/Well Water: City water

Sewer Water (leach field, dry wells): N/A

Septic System (tiles or leach field): Tiles (2)

On-site Treatment Facility (lagoons, ponds): None observed

Power (company name): I.E.M.P.

Natural Gas: NIPSO

VIII. Solid and Hazardous Waste

Types of Storage Containers: Dumpster - type containers

Location: Loading dock

Contents: Misc. waste from seat manufacturing

Condition of Containers: Good

Disposal Methods: Disposal off-site by others

Spills/Leaks: None observed

On-Site Chemicals: 5 gal Toluene, 5 gallons Methylene Chloride

Purpose of Chemicals (process, cleaning): Cleaning

Use of Herbicides or Pesticides: None observed

IX. Adjacent Land Use

Property Use (north): Light Industrial

Property Use (south): Light Industrial

Property Use (east): Sales of Light Industrial

Property Use (west): Light Industrial

Past Use of Surrounding Area: Agricultural

Topography: Flat

Transformers: None observed

USTs (include all information under on-site USTs): None observed

ASTs: Liquid Argon tank at 23542 Cooper Drive

Solid/Hazardous Waste: None observed

Spills/Leaks: None observed

X. Interviews

Property Owner/Tenant (name): Dave Dysert (Owner)
Ludwig (Past owner)

Adjacent Properties: No.

The data provided hereunder neither purports to be nor constitutes legal or medical advice. It is further understood that ERIIS MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND, INCLUDING, BUT NOT LIMITED TO, THE WARRANTIES OF FITNESS FOR A PARTICULAR PURPOSE OF MERCHANTABILITY, NOR ANY SUCH REPRESENTATIONS OR WARRANTIES TO BE IMPLIED WITH RESPECT TO THE DATA FURNISHED, AND ERIIS ASSUMES NO RESPONSIBILITY WITH RESPECT TO CUSTOMER'S, ITS EMPLOYEES', CLIENTS', OR CUSTOMERS' USE THEREOF. ERIIS SHALL NOT BE LIABLE FOR ANY SPECIAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES RESULTING, IN WHOLE OR IN PART, FROM CUSTOMER'S USE OF THE DATA. Liability on the part of the Environmental Risk Information & Imaging Services (ERIIS) is limited to the monetary value paid for this report. The report is valid only for the geographical parameters specified on the cover page of this report, and any alteration or deviation from this description will require a new report. This report does not constitute a legal opinion.

TABLE OF CONTENTS

- I. REPORT OVERVIEW
- II. DIGITAL CUSTOM PLOTTED MAP
- III. STATISTICAL PROFILE
- IV. DATABASE RECORDS
- V. SANBORN FIRE INSURANCE MAPS
- VI. TOPOGRAPHICAL MAPS

I. REPORT OVERVIEW

ERIIS Report Overview

The ERIIS Report consists of five (5) basic sections:

- * Digital Custom Plotted Map
- * Database Records
- * Statistical Profile
- * Sanborn Fire Insurance Map(s)
- * Topographical Map

Digital Custom Map

Each site-specific Digital Custom Map is plotted using U.S. Census TIGER Files. The cross in the center of the map represents the study site. The red circle represents the study radius, usually one mile. Reported federal/state hazardous waste and toxic chemical sites are plotted on the map and are easily distinguished by different symbols.

Statistical Profile

The Statistical Profile is an at-a-glance numeric summary of the data included in the ERIIS Report.

Database Records

This section presents detailed federal and state database information for each site within the study radius. Sites are easily located on the digital map by using the number in the MAP ID column of the report.

Note: Many of the sites reported in federal/state databases cannot be plotted due to inaccurate or incomplete addresses (e.g., PO Box number, street name with no number). Still, they are potentially within the study radius. ERIIS reports these sites using progressively broader search criteria to ensure that all potentially relevant hazardous sites are included. All zip codes within and intersected by the study radius are searched, as well as records that simply report the relevant city or county. Where applicable, federal and state database information is further subdivided.

Sanborn Fire Insurance Maps

ERIIS has assembled a collection of Historical Sanborn Fire Insurance Maps covering 14,000 cities and towns. In some cases, however, the ERIIS Report will include a notice that no maps were found. This notice should serve as evidence of due diligence.

Topographic Map

ERIIS provides a topographic map with each report which accurately depicts the natural and man-made features of the land. The shape and elevation of the terrain are represented by contour lines and specific features, such as roads, towns, and vegetation, are portrayed by map symbols and colors. Standard topographic maps are produced at a 1:24,000 scale, or one inch represents 2000 feet.

Selection of PROPERTY records requires an accurate street address in the ERIIS job order.

ZIP CODE and CITY/COUNTY sites are not radius reportable due to insufficient and/or inaccurate addresses reported by federal/state agency. These sites are reported within the study site zip code(s) and/or city/county and may be within the study site radius. These sites require further investigation to accurately assess proximity to the study site.

A blank radius count indicates that the database was not searched by this radius per client instructions.

NR in a radius or zip code count indicates that the database cannot be reported by this search criteria due to insufficient and/or inaccurate addresses reported by a federal/state agency.

State data in paper format is sorted using the most specific secondary search criteria available (zip code, city, or county).

IV. DATABASE RECORDS

NATIONAL PRIORITIES LIST

The NPL Report, also known as the Superfund List, is an EPA listing of uncontrolled or abandoned hazardous waste sites. The list is primarily based on a score that the site receives from the EPA's Hazardous Ranking System. These sites are targeted for possible long-term remedial action under the Superfund Act.

WEAVERB00S000995

CONRAIL RAIL YARD (ELKHART)

INDIANA

EPA ID# IND000715490

EPA REGION 5
CONGRESSIONAL DIST. 03

Elkhart County
Elkhart

Other Names:
County Road 1

Site Description

The Conrail Rail Yard (Elkhart) began operations in 1956 as part of the New York Central Railroad and continued operations as a subsidiary of the Penn Central Transportation Company until 1976. From 1962 to 1968, numerous citizen complaints regarding oil discharges from the rail yard to the nearby St. Joseph River were filed with State and local authorities. In 1976, Conrail took over the rail yard's functions. From 1976 to 1986, the rail yard experienced spills and releases of oil, diesel fuel, hydrochloric acid, caustic soda, and various petroleum-related substances. Also, track-cleaning fluids and engine degreasers were used and disposed of at the site. The site contains several ponds used to stabilize waste and separate oils and a disposal area, now covered, where rail yard wastes were discarded. In 1986, the EPA discovered volatile organic compounds (VOCs) in the groundwater near the site. Approximately 41,000 people live in Elkhart and the entire population obtains its drinking water from groundwater. The Elkhart Water Works serves approximately 41,000 persons living northeast of the site. The remaining population obtains drinking water from private residential wells.

Site Responsibility: This site is being addressed through Federal actions.

NPL LISTING HISTORY

Proposed Date: 06/24/88

Final Date: 08/30/90

Threats and Contaminants

Groundwater and soil at the site contain VOCs. People could be exposed to hazardous substances from the site by accidentally coming into direct contact with or ingesting contaminated groundwater or soil.

Cleanup Approach

This site is being addressed in three stages: immediate actions and two long-term remedial phases focusing on cleanup of the entire site and of the source area.

Response Action Status

Immediate Actions: The EPA began a program to sample the groundwater off site in 1986. The EPA sampled 88 residential wells and detected various VOCs. The EPA provided bottled water to residents whose wells were affected. Also, the EPA installed 76 activated carbon filter units in residences. As part of the immediate action, the EPA also removed 28 drums containing waste paint from the nearby Martin property in 1987.

Entire Site: The EPA started an investigation of the nature and extent of contamination at the site in 1988. This study is defining the contaminants and recommending various cleanup alternatives. It is scheduled to be completed in 1991. Upon completion of the investigation, the EPA will select a remedy to provide a permanent safe drinking water source to residents and to contain the contaminated groundwater. Additional studies are planned to further characterize the extent of the groundwater contamination and to identify the source area. These studies are expected to be completed in 1992.

Source Area: In 1991, the EPA is scheduled to begin an investigation of the source of the contamination. The study is scheduled for completion in 1993.

Environmental Progress

The immediate actions of providing bottled water, installing carbon filter units, and removing drums have reduced the potential for exposure to contaminated drinking water and continue to protect residents near the Conrail Rail Yard (Elkhart) site while cleanup actions are being planned and investigations are ongoing.

HIMCO DUMP INDIANA

EPA ID# IND980500292

EPA REGION 5
CONGRESSIONAL DIST. 03
Elkhart County
Elkhart

Site Description

The 50-acre Himco Dump site, located in the town of Elkhart, operated as a dump from 1960 until 1976. During its operation, general refuse and medical, pharmaceutical, and industrial wastes were disposed of on the site. As waste was brought into the dump, marshy land was filled in and then covered with sand. The elevation at the center of the site is built up approximately 15 feet. Along the perimeter of the site, the elevation is 5 feet higher than the original levels. The disposal practices make it difficult to determine exact locations where the waste was buried; however, the present topography of the site suggests that waste may have been deposited over the entire 50 acres. Vegetation on the site appears to have been affected by the contamination. During a site inspection in 1984, the EPA observed several leachate streams at various locations, as well as strong sulfate and methane odors. The EPA also detected several contaminants in monitoring wells downgradient of the site. In 1974, the State Health Commissioner advised the site operator to drill deep wells to replace six contaminated shallow residential wells located adjacent to and just south of the site. A 1988 inspection of the site by the Indiana State Board of Health (ISBH) and the Department of Environmental Management identified disposal areas that were uncovered and exposed to the environment. Wells within 3 miles of the site serve at least 20,000 people. The closest residences to the site are located on the southern perimeter. A 200-home mobile home park is located downgradient of the site, to the south of the landfill. Several small industries, a residential area, and land used for agricultural purposes are located in the vicinity of the site.

Site Responsibility: This site is being addressed through Federal and State actions.

NPL LISTING HISTORY

Proposed Date: 06/24/88

Final Date: 02/21/90

Threats and Contaminants

Groundwater is contaminated with heavy metals including selenium and beryllium and the volatile organic compounds (VOCs) trichloroethylene (TCE) and toluene. The dump is located over a continuous portion of shallow groundwater that is the sole source of drinking water for the town of Elkhart. The drinking water supply for the town may be at risk if site-related contaminants migrate into this shallow groundwater aquifer under the site. The contamination on the site also could adversely affect the nearby wetlands.

Cleanup Approach

The site is being addressed in two stages: immediate actions and a long-term remedial phase focusing on cleanup of the entire site.

Response Action Status

Immediate Actions: In response to complaints of well contamination, the site operator installed deep wells to replace nearby contaminated residential drinking water wells.

Entire Site: In 1989, the EPA began a study into the nature and extent of site contamination and to identify alternative cleanup methods. The first phase of field work has been completed and is being evaluated. Additional field work will begin in mid-1991. The EPA expects to finish this study in 1993. Actual cleanup work is anticipated to begin in 1994.

Site Facts: In 1975, the owner of the site signed a Consent Agreement with the Stream Pollution Control Board of Indiana that resulted in the closure of the site in 1976. Possible contamination of 6 residential shallow wells, ranging from 22 to 62 feet deep, was reported to the Elkhart County Health Department, the ISBH, and the EPA in 1974. In response to these complaints, the site operator drilled new water wells for these six individuals, and when these wells were sampled in 1984, they were not found to be contaminated.

Environmental Progress

New wells installed by the site operator for the six residences with contaminated wells reduced the potential for exposure to the contaminated groundwater. After listing the Himco Dump site on the NPL, the EPA performed preliminary evaluations and determined that the site does not pose an immediate threat to the surrounding community or the environment while investigations leading to the selection of a final cleanup remedy for the site are taking place.

**COMPREHENSIVE ENVIRONMENTAL RESPONSE, COMPENSATION,
AND LIABILITY INFORMATION SYSTEM**

The CERCLIS list is a compilation of known and suspected uncontrolled or abandoned hazardous waste sites. These sites have been investigated, or are currently under investigation by the EPA for the release, or threatened release of hazardous substances. Once a site is placed on CERCLIS, it may be subjected to several levels of review and evaluation and ultimately placed on the National Priorities List.

NUCLEAR FACILITIES

The following is a listing of the active Nuclear Power Plants that are within the subject property's county.

OUR SEARCH OF THIS ERIIS DATABASE FOUND NO REPORTED
SITES FOR THE SELECTED SEARCH CRITERIA

OPEN DUMPS

The Resource Conservation and Recovery Act defines the term "open dump" to mean "... any facility or site where solid waste is disposed of which is not a sanitary landfill which meets the criteria promulgated under Section 4004 and which is not a facility for disposal of hazardous waste." Thus, any facility which fails to comply with any one element of the Criteria is an open dump.

Hazardous Waste listed in Section 261.31 or Section 261.32 and identified by EPA Hazardous Waste Nos. F020, F021, F022, F023, F026, and F027, are subject to the exclusion limits for acutely hazardous waste established in Section 261.5.

RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM
TREATMENT, STORAGE, AND DISPOSAL FACILITIES

The RCRIS_TS Report contains information pertaining to those facilities
that either treat, store, or dispose of hazardous waste.

EPA HAZARDOUS WASTE NUMBERS -- HAZARDOUS WASTE DESCRIPTION

F010 -- Quenching bath residue from oil baths from metal heat treating operations where cyanides are used in the process.

F011 -- Spent cyanide solutions from salt bath pot cleaning from metal heat treating operations.

F012 -- Quenching wastewater treatment sludges from metal heat treating operations where cyanides are used in the process.

F019 -- Wastewater treatment sludges from the chemical conversion coating of aluminum.

F020 -- Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tri- or tetrachlorophenol, or of intermediates used to produce their pesticide derivatives. (This listing does not include wastes from the production of hexachlorophene from highly purified 2,4,5-trichlorophenol.)

F021 -- Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of pentachlorophenol, or of intermediates used to produce its derivatives.

F022 -- Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tetra-, penta-, or hexachlorobenzenes under alkaline conditions.

F023 -- Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tri- and tetrachlorophenols. (This listing does not include wastes from equipment used only for the production or use of hexachlorophene from highly purified 2,4,5-trichlorophenol.)

F024 -- Wastes, including but not limited to, distillation residues, heavy ends, tars, and reactor clean-out wastes from the production of chlorinated aliphatic hydrocarbons, having carbon content from one to five, utilizing free radical catalyzed processes. (This listing does not include light ends, spent filters and filter aids, spent dessicants, wastewater, wastewater treatment sludges, spent catalysts, and wastes listed in §261.32.)

F026 -- Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tetra-, penta-, or hexachlorobenzene under alkaline conditions.

F027 -- Discarded unused formulations containing tri-, tetra-, or pentachlorophenol or discarded unused formulations containing compounds derived from these chlorophenols. (This listing does not include formulations containing hexachlorophene synthesized from prepurified 2,4,5-trichlorophenol as the sole component.)

F028 -- Residues resulting from the incineration or thermal treatment of soil contaminated with EPA Hazardous Waste Nos. F020, F021, F022, F023, F026, and F027.

EPA HAZARDOUS WASTE NUMBERS -- HAZARDOUS WASTE DESCRIPTION

- K024 -- Distillation bottoms from the production of phthalic anhydride from naphthalene.
- K025 -- Distillation bottoms from the production of nitrobenzene by the nitration of benzene.
- K026 -- Stripping still tails from the production of methyl ethyl pyridines.
- K027 -- Centrifuge and distillation residues from toluene diisocyanate production.
- K028 -- Spent catalyst from the hydrochlorinator reactor in the production of 1,1,1-trichloroethane.
- K029 -- Wastes from the product steam stripper in the production of 1,1,1-trichloroethane.
- K030 -- Column bottoms or heavy ends from the combined production of trichloroethylene and perchloroethylene.
- K031 -- By-product salts generated in the production of MSMA and cacodylic acid.
- K032 -- Wastewater treatment sludge from the production of chlordane.
- K033 -- Wastewater and scrub water from the chlorination of cyclopentadiene in the production of chlordane.
- K034 -- Filter solids from the filtration of hexachlorocyclopentadiene in the production of chlordane.
- K035 -- Wastewater treatment sludges generated in the production of creosote.
- K036 -- Still bottoms from toluene reclamation distillation in the production of disulfoton.
- K037 -- Wastewater treatment sludges from the production of disulfoton,
- K038 -- Wastewater from the washing and stripping of phorate production.
- K039 -- Filter cake from the filtration of diethylphosphorodithioic acid in the production of phorate.
- K040 -- Wastewater treatment sludge from the production of phorate.
- K041 -- Wastewater treatment sludge from the production of toxaphene.
- K071 -- Brine purification muds from the mercury cell process in chlorine production, where separately prepurified brine is not used.
- K073 -- Chlorinated hydrocarbon waste from the purification step of the diaphragm cell process using graphite anodes in chlorine production.
- K083 -- Distillation bottoms from aniline production.

EPA HAZARDOUS WASTE NUMBERS -- COMMON CHEMICAL NAME

EPA HW #	CAS #	COMMON CHEMICAL NAME

EMERGENCY RESPONSE NOTIFICATION SYSTEM

ERNS is a national computer database system that is used to store information on the sudden and/or accidental release of hazardous substances and petroleum into the environment. The ERNS reporting system contains preliminary information on specific releases, including the spill location, the substance released, and the responsible party.

OUR SEARCH OF THIS ERIIS DATABASE FOUND NO REPORTED
SITES FOR THE SELECTED SEARCH CRITERIA

FACILITY INDEX SYSTEM

The FINDS Report is a computerized inventory of all facilities that are regulated or tracked by the EPA. These facilities are assigned an identification number which serves as a cross-reference for other databases in the EPA's program system. Each FINDS record indicates the EPA Program Office that is responsible for the tracking of the facility.

FINDS DESCRIPTION

AIRS (Aerometric Information Retrieval System)- The AIRS system contains detailed information pertaining to over 85,000 sites which submit air emissions reports. Developed under the Clean Air Act, this database also maintains data on compliance status and enforcement actions.

CDS (Compliance Data System)- Developed in conjunction with the AIRS system, CDS contains compliance information including: compliance status, agency actions, and inspections, for the major sources of the five primary air pollutants.

CERCLIS (Comprehensive Environmental Cleanup Liability Information System)- This system contains information on over 30,000 sites that have been identified as hazardous, or potentially hazardous, and may require cleanup. Information included in this database is provided by both state and federal sources.

CICIS (Chemicals In Commerce Information System)- The CICIS database is responsible for the tracking of hazardous chemicals that are listed in the Toxic Substances Control Act (TSCA). Data elements include the manufacturer's name and address, CAS registry number, chemical prefaced name, and any possible synonyms.

CUS (Chemical Update System)- CUS is used to track facilities which manufacture or import specific toxic chemicals in excess of 10,000 pounds per year.

DOCKET- A national system containing all pertinent information regarding a civil or administrative enforcement action taken by the EPA, or state agency, against violators of environmental laws or statutes.

FATES (FIFRA and TSCA Tracking System)- The FATES system contains information regarding Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA) legislation. This database also contains selected data concerning pesticide producers.

FFIS (Federal Facility Information System)- FFIS is an index of selected federally owned facilities. It is a monitoring and tracking tool for the Office of Federal Facilities Enforcement. Its main purpose is to monitor pollution abatement programs for federal facilities worldwide.

FRDS (Federal Reporting Data System)- The FRDS database maintains an inventory of over 190,000 public drinking water wells which serve populations in excess of 25 people each. This system also contains compliance data (violations and follow-up actions) reported by primary agents under the Supervision of Public Water Supplies program.
